Single Leg Income Distribution

Example Explanation:

According to the example below, there are four top-ups of 20 USD: A, B, C, and D. So, based on the timing of registration, A will qualify for single leg income because of the three IDs (B, C, and A). After that, B will qualify because of the next three IDs (B, D, and C), and now C will qualify because of the next three IDs (A, B, and D). Like this, every ID will qualify from the next new three IDs in the single leg tree.
